(1) Describe the purpose of this DoD information system or electronic collection and briefly describe the types of personal information about individuals collected in the system.

The purpose of this information collection is to provide the US Army Public Health Command a standardized, enterprise-wide, information management and technology capability, known as the Army Behavioral Health Integrated Data Environment (ABHIDE). The ABHIDE integrates information from non-related/dispersed databases into a comprehensive health surveillance database to support mental, behavioral, social health and public health activities. Surveillance refers to the systematic collection, analysis, and interpretation of health data that has a significant impact on Army public health, which is then used to drive decisions about health policy and prevention strategies. Objectives include establishing event-specific registries, such as a suicide registry, identifying risk factors, developing mitigation strategies, evaluating intervention and prevention programs, and prospectively monitoring Army communities with respect to their mental, behavioral, and social health. Categories of information maintained in the database include personnel, medical and legal data.

The types of personal information collected in this system include demographic data as well as law enforcement, medical, disability, employment, and education information.

(2) Briefly describe the privacy risks associated with the PII collected and how these risks are addressed to safeguard privacy.

The privacy risks associated with the PII collection are unauthorized access, inaccurate information in the system, and unauthorized disclosure of PII. There are security measures in place to mitigate these risks as indicated in item 3d below.
