g. Summary of DoD information system or electronic collection. Answers to these questions should be consistent with security guidelines for release of information to the public.

(1) Describe the purpose of this DoD information system or electronic collection and briefly describe the types of personal information about individuals collected in the system.

The GlobeStar Systems Connexall® PRO is an on-site messaging integration solution which forwards patient monitor status and alarm information to the user via display devices provided by third-party mobile device companies. Users receive interactive, time-critical information from patient monitoring devices directly via their display devices as text, alarms, or data. This software allows users to be aware of their patients' status and alarm conditions when they are away from the patient and patient monitoring system. Some US Army medical treatment facilities integrate this software with the Vocera® B3000n Communication Badge display device to notify staff of critical device detected information about their patients. The Vocera B300n Badge display device is assessed in a separate PIA.

The type of personal information collected in the system includes patient demographic information and medical information.

(2) Briefly describe the privacy risks associated with the PII collected and how these risks are addressed to safeguard privacy.

The risks associated with the PII collected are unauthorized access and unauthorized disclosure. There are technical, administrative, and physical security measures in place to minimize the these risks. The specific security measures are addressed in Section 3 below.
